

Crack the password

Description

World Password Day on 2 May reminded us to create strong passwords that keep not only our business but also our personal data safe from cyber-attacks.

Here are a few tips to lock down and safeguard your online accounts:

1. Think before you click – be vigilant against phishing attempts and protect your sensitive information.
2. Practice good password habits and keep updated to stay one step ahead of cyber threats.
3. Your passwords must include upper and lowercase letters, paraphrases and a combination of at least 14 characters and numbers.
4. Remember to change your password every month.
5. Do not share your login credentials or write them down.
